spotter

Full Stack Developer

Assessment Instructions:

- Build a Full-stack app using Django and React. Deliverables:
  - Create a live hosted version (can use Vercel.app)
  - Create a 3-5 minute loom going over your app and your code
  - Share the Github code
- $100 reward
  - We will test the hosted version for accuracy and the accuracy must be up to standards
  - UI and UX must be good. Pay attention to good design and aesthetics, it can compensate for some inaccuracies in output
- Objective
  - Build an app that takes trip details as inputs and outputs route instructions and draws ELD logs as outputs
  - Build an app that takes in the following inputs:
    - Current location
    - Pickup location
    - Dropoff location
    - Current Cycle Used (Hrs)
  - Outputs
    - Map showing route and information regarding stops and rests -- find and use a free map API
    - Daily Log Sheets filled out -- need to draw on the log and fill out the sheet, multiple log sheets will be needed for longer trips
- Assumptions
  - Property-carrying driver, 70hrs/8days, no adverse driving conditions
  - Fueling at least once every 1,000 miles
  - 1 hour for pickup and drop-off
